SPEAKERS:

- ▶ **Ross Deeter**
Senior Regional Manager | Novum Structures
- ▶ **Brian Vande Zande**
Director of Sales | Novum Structures

The Nevada DBIA-WPR Chapter invites you to join Novum for a behind-the-scenes look at one of the most distinctive elements of the new A's Las Vegas ballpark: the cable-net canopy and glass window that will frame the Strip. As part of a 33,000-seat, climate-controlled stadium defined by five overlapping, pennant-inspired roof forms, this highly engineered system is both a signature architectural feature and a demanding construction challenge. Novum will share how its design-build approach turns an ambitious concept into a buildable, coordinated package through early trade-partner collaboration, constructability input, precision engineering, sequencing, and field integration. This is a practical look at the decisions and partnerships required to deliver a one-of-a-kind structure on one of Las Vegas's most visible projects.
